Patent No. 6083478

Patent No. 6083478

GENERAL INFORMATION:

APPLICANT: Allaway, Graham P.

APPLICANT: Maddon, Paul J.

TITLE OF INVENTION: No. 6083478-Peptidyl Moiety-Conjugated CD4-Gamma2 and CD4-IgG2

TITLE OF INVENTION: No. 8083478-Peptidyl Moiety-Conjugated CD4-Gamma2 and CD4-IgG2

TITLE OF INVENTION: Immunoconjugates and Uses Thereof

FILE REFERENCE: 41215-A-PCT-US

CURRENT PELING DATE: 1996-06-10

EARLIER APPLICATION NUMBER: PCT/US93/07422

EARLIER APPLICATION NUMBER: 07/927,931

EARLIER APPLICATION NUMBER: 07/927,931

SARIATER APPLICATION NUMBER: 07/927,931
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             383 FRVVSVLTVVHQDWLNGKEYKCKVSNKGLPAPIEKTISKTKGQPREPQVYTLPPSREEMT 442

A Molecule type: DNA

A) Residues: 1-13 c XAO.

A) Residues: 1-13 c XAO.

A) Residues: 1-13 c XAO.

A) Cross-references: GB:D00307; NID:g220448; PIDN:BAA00213.1; PID:g220449

A) Note: the authors translated the codon AAG for residue 32 as Asn and GAC for 92.

C) Comment: The gene encoding this protein was isolated from a hybridoma that product C; Superfamily: immunoglobulin V region; immunoglobulin homology

C) Keywords: heterotetramer; immunoglobulin munoglobulin homology

C) Regionaln: signal sequence #status predicted <SIG>

F; 1-13/Domain: signal sequence #status predicted <AMAI>

F; 34-117/Domain: immunoglobulin homology <IMM>

M. Complete genome sequence of enterohemorrhagic Escherichia coli

O157:H7 and genomic comparison with a laboratory strain K-12.";

O157:H7 and genomic comparison with a laboratory strain K-12.";

DNA Res. 8:11-22(2001).

PUNCIION: MAY FACILITATE THE SECRETION OF THE PEPTIDE ANTIBIOTIC

NICROCIN B17 (MCGB17) BY COMPLETING ITS MATURATION. SUPPRESSES THE

INHIBITORY ACTIVITY OF THE CHEON STORAGE REGULATOR (CSRA).

C. I. SIMILARITY: BELONGS TO THE TLDD/FWBA FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This SWISS-PROT entry is copyright. Human, anti-tissue factor light chain variable region, H36.D2.B7, anti-tissue factor heavy chain variable region, inhibition; antibody; blood coagulation, thrombosis, restenosis, thromboembolic condition, cardiovascular, infection, neoplastic disease, clot, diagnosis. Human anti-tissue factor antibody hypervariable region #5. Wong HC; Nieves EL, AAW71859 standard; peptide; 17 AA. (SUNO-) SUNOL MOLECULAR CORP 98WO-US04644. 97US-0814B06. (first entry) Jiao J, Luepschen L, WPI; 1998-520804/44. N-PSDB; AAV61138. 10-MAR-1998; WO9840408-A1. 10-MAR-1997; 10-DEC-1998 Homo sapiens 17-SEP-1998. AAW71859; RESULT 1 

```
The present sequence represents a hypervariable region from the human and does not bind non-native TP. The antibody capable of specifically and does not bind non-native TP. The antibody capable of specifically binding native TP may be used for inhibiting blood coagulation and also for reducing TP levels in a mammal. The antibodies can be used, e.g. treat thromboses particularly to prevent or inhibit restenosis, or other thromboses following an unvasive medical procedure such a arterial or cardiac surgery (e.g. angioplasty, endarterectomy, deployment of a stert, use of catheter, graft implantation or use of anteriovenous shunt). The antibodies can also be used as a carrier for arteriovenous shunt). The antibodies can also be used as a carrier for arteriovenous shunt) when antibodies can also be used as a carrier for arteriovenous shunt) when antibodies can also be used as a carrier for arteriose, or a cytotoxic agent by conjugating a suitable toxin to the antibody. Further the antibodies can be used for treating a tromboembolic condition associated with cardiovascular disease, and the antibody and associated with cardiovascular disease, and the antibody.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human, anti-tissue factor light chain variable region, H36.D2.B7; anti-tissue factor heavy chain variable region, inhibition, antibody; blood coagulation; thrombosis; restenosis; thromboembolic condition;

```
The present sequence represents the human anti-tissue factor heavy chain variable region from an antibody that binds native human tissue factor (TF) and does not bind non-native TF. The antibody capable of specifically binding native TF may be used for inhibiting blood coagulation and also for reducing TF levels in a mammal. The antibodies can be used, e.g. to treat thromboses particularly to prevent or inhibit restencis, or other thromboses following an invasive medical procedure such as arterial or cardiac surgery (e.g. angigplasty.) condatrescency, deployment of a stent, use of catheter, graft implantation or use of an arteriovenous shunt). The antibodies can also be used as a carrier for drugs, particularly pharmaceuticals targeted for interaction with a blood clot such as streptokinase, tissue plasminogen activator (t-pA) or unokinase, or a cytocoxic agent by conjugating a suitable toxin to the antibody. Further the antibodies or as arthromboshly condition associated with cardiovascular disease, an infection disease, a neoplastic disease or a simple of the antibodies can also be used for detection

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human tissue factor; TF; humanised; antibody; mouse monoclonal antibody; ATR-2; ATR-4; ATR-5; ATR-7; ATR-8; thrombotic disease; DIC; disseminated intravascular coagulation; immunogenicity; chimeric.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention describes chimeric antibody (Ab) heavy (H) chains containing the variable region of the H chain of a mouse monoclonal Ab recognising human tissue factor (hTF) and the constant region of the H chain of a human Ab. The variable region is one of six specified sequences (which are the H chain variable regions from mouse monoclonal Ab's ATR-2,3,4,5,7 or 8). Also described are chimeric Ab light (L)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Humanised antibody recognizing human tissue factor, used for treatment of disseminated intravascular coagulation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

The present invention describes chimeric antibody (Ab) heavy (H) chains containing the variable region of the H chain of a mouse monoclonal Ab recognising human tissue factor (hrr) and the constant region of the H chain of a human ab. The variable region is one of six specified sequences (which are the H chain variable regions from mouse monoclonal Ab's ATR-2,3,4,5,7 or 8). Also described are chimeric Ab light (L) and answer or ariable region of the L chain of a mouse monoclonal Ab recognising human tissue factor (hrr) and the constant region of the L chain of a human Ab, the variable region being one of six specified sequences (which are the L chain variable regions from mouse monoclonal Ab's ATR-2,3,4,5,7 or 8). The chimeric Ab's can be used for the treatment and prevention of thrombotic disease, especially of disseminated intravascular coagulation (DIC). The humanised antibody has
chains containing the variable region of the L chain of a mouse monoclonal Ab recognising human tissue factor (hTF) and the constant region of the L chain of a human Ab, the variable region being one of six specified sequences (which are the L chain variable regions from mouse monoclonal Ab's ATR-2,3,4,5,7 or 8). The chimeric Ab's can be used for the treatment and prevention of thrombotic disease, especially of disseminated intravascular coagulation (DIC). The humanised antibody has the high hift binding activity of the mouse monoclonal antibody but greatly reduced immunogenicity, AAZ33001 to AAZ33031 and YS27007 to AAY52767 represent sequences used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human tissue factor; TF; humanised; antibody; mouse monoclonal antibody;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                              Humanised antibody; monoclonal antibody; MAb; antibody engineering;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This is the amino acid sequence of the region of the murine monoclonal antibody (WAD) D12 heavy chain variable region (VH) that is altered in humanised D12 VH (see also AMM4097). A synthetic gene (see AAV81901) encoding the protein was prepared from synthetic oligonucleotides and used to prepare an expression vector for humanised D12 VH. D12 is an anti-human alpha-v beta-3 vitronectin receptor MAD. Humanised D12 MADs can be used for passive immunotherapy of disorders mediated by the alpha-v beta-3 vitronectin receptor, e.g. restenosis and anglogenic associated

This is the amino acid sequence of the heavy chain variable region (VH) of the anti-human alpha-v beta-3 vitronectin receptor murine monoclonal antibody D12, as deduced from isolated DNA (see ANV1797). D12 VH and VL (see AAM84094) show sequence similarity to Kabat VH subgroup I (see AAM84095) and Kabat VK subgroup III (see AAM84099) were constructed by combining the framework regions of the human V region consensus sequences with complementarity determining regions of D12 (keeping some preferred murine framework regidues). The human vegion some preferred murine framework residues). The human vegion some preferred murine framework residues. The human vegion some preferred murine framework residues. The human vegion some preferred murine framework residues. The human vegion some preferred murine framework residues. The human vegion receptor and capable of neutralising the receptor. They can be used for passive immunotherapy of a disorder ceptor. They can be used for passive immunotherapy of a disorder sesociated by the alpha-v beta-3 receptor, e.g. cardiovascular cisorders or angiogenic-related disorders, such as angiogenesis associated with diabetic retinopathy, atherosclerosis and cancer especial architis and cancer, e.g. solid tumour metastasis, and cisoasses where bone resorption is associated with pathology such as osteoporosis, hypercalcamia
                                                                                                                                                                                                                                                                Humanised antibody; monoclonal antibody; MAD; antibody engineering; mouse; human; vitronectin; alpha-v beta-3; receptor; restenosis; cancer; metastasis; rheumatoid archritis; atherosclerosis; anglogenesis; diabetic retinopathy; inflammation; macular degeneration; osteoporosis; paget's disease; hyperparathyroidism; hypercalcaemia; therapy; immunotherapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New anti alpha v beta 3 vitronectin receptor antibodies - used for immunotherapeutic treatment of e.g. diabetic retinopathy, inflammatory disorders, atherosclerosis, restenosis, cancers or
                                                                                                                                                                                                                                     Murine vitronectin alpha-v beta-3 receptor MAb VH region.

are retained. The humanised heavy chain can be expressed in host
cells using nucleic acid molecules (see AAV71799) of the invention.
Humanised D12 VL is also provided (see AAV84098)). The humanised
antibodies can be used for passive immunotherapy of disorders
mediated by the alpha-v beta-3 receptor, e.g. cardiovascular or
angiogenic-related disorders, such as angiogenesis associated
with diabetic retinopathy, atherosclerosis and restenosis, chronic
inflammatory disorders, macular degeneration, rheumatorid arthritis
and cancer, e.g. solid tumour metastasis, and diseases where bone
resorption is associated with pathology such as osteoprosis,
hyperparathyroidism, Paget's disease, hypercalcemia of malignancy,
csteolytic lesions produced by home metastasis, bone loss due to
immobilisation or sex hormone deficiency. They can also be used for
targeted drug therapy, and for detection and diagnosis.
```

117 AA; Sequence

This polypeptide comprises version 'b', of a reshaped human antibody AUK12-20 VH region. A DNA fragment encoding the polypeptide was subcloned into vector pucins as a template for PCR amplification and production of version 'a' of a reshaped human 21.6 VH region (see AAW22413) that can be used in the construction of novel humanised anti-alpha-4 integrin antibodies. Claimed humanised antibodies are useful in the treatment of asthma, atherosclerosis, AIDS, dementia, diabetes, inflammatory bowel disease, theumatoid arthritis, transplant rejection, graft versus host disease, tumour metastasis, nephritis, atopic dermatitis, psoriasis, myocardial ischaemia, and acute leukocyte

mediated lung injury

The sequences given in AAR29016-17 are portions of monoclonal antibodies which were encoded by plasmids contained within the mouse hybridoma, AUK12-20. The DNA encoding the complementarity determining regions (CDR s) was isolated by polymerase chain reaction. These antibodies recognise human interleukin-6 receptor (I.F.6R). The hybridoma cells were transformed with plasmids containing fragments of the antibody gene which caused the production of the antibody from the hybridoma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human, antibody, interleukin-6; receptor; IL-6R; light chain; L; H; heavy chain; variable region; mouse; monoclonal; hybridoma; AUK12-20; plasmid; p12-k2; p12-k2.
                                                                                                                                                                                                                                 Reconstituted human antibody to human interleukin.6 receptor - has low antigenicity and contains mouse V-region complementarity determining regions

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     8
                                                                                                                                                                                                                                                The sequences given in AAR29016-17 are portions of monoclonal antibodies which were encoded by plasmids contained within the mouse hybridoma, AUK12-20. The DNA encoding the complementarity determining regions (CDR'S) was isolated by polymerase chain reaction. These antibodies recognise human interleukin-6 receptor (IL-6R). The hybridoma cells were transformed with plasmids containing fragments of the antibody gene which caused the production of the antibody from the hybridoma

New polypeptide sequence having part or all of the primary structural conformation of one or more TSH receptor epitopes, useful for treating an autoimmune disease associated with an immune reaction to a TSH receptor, e.g. thyroid cancer -
                                                                                                                                                                                                 The sequences given in AAR28668-69 were encoded by plasmid sequences which were used in example to illustrate the production of a human antibody which recognises human interleukin-6 receptor (IL-6R). The antibody comprises light (L) chain and heavy (H) chain variable regions which were derived from a mouse monoclonal antibody produced from the hybridoma AUK12-20 which contained the plasmids pl2-k2 and pl2-h2.
                                                                                                              Reconstituted human antibody to human interleukin-6 receptor has low antigenicity and contains mouse V-region complementarity determining regions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Thyrotropin receptor; TSH receptor, epitope region; antibody; autoantibody; autoimmune disease; thyroid tissue; cytostatic; gene therapy; immune reaction; thyroid cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                TSH receptor antibody 17D2 heavy chain amino acid sequence.
                                                                                                                                                                                                                                                                                                      (Updated on 25-MAR-2003 to correct PN field.)

The present invention describes a polypeptide sequence comprising part or all of the primary structural conformation of one or more thyrotropin (TSH) receptor repitopes with which autoantibodies and/or lymphocytes produced in response to a TSH receptor interact. Also described: (1) one or more receptor TSH epitopes with which the autoantibodies and/or! or more receptor TSH epitopes with which the autoantibodies and/or! or materact. Also described above; (2) a method of screening for autoantibodies or lymphocytes produced in response to a TSH receptor in a sample of body fluid obtained from a subject suspected of suffering from, susceptible to, having or recovering from autoimmune disease associated with an immune reaction to a TSH receptor; (3) a binding partner for a TSH receptor, which is capable of binding partner does not comprise TSH or naturally produced antibodies to binding partner does not comprise TSH or naturally produced antibodies to the TSH receptor; and (4) a combination comprising the binding partner does not comprise TSH or naturally produced antibodies to the TSH receptor; and/or tissue containing a TSH receptor, for simulating thyroid tissue, and/or tissue containing a TSH receptor, for simulating thyroid tissue the manufacture of a medicament for simulating thyroid can be used for treating an autoimmune disease associated with an immune reaction to a TSH receptor. The specific binding partner is useful for the manufacture of a medicament for stamilating thyroid cancer. Act or the manufacture of a medicament for stamilating thyroid cancer. Act of a medicament for stamilating thyroid cancer. Act of the manufacture of a medicament for stamilating thyroid cancer. Act of the medicament for stamilating thyroid cancer. Act of the medicament in ABP95719 to ABP95710 represent TSH receptor antibody when the present interest in the present interest in the present interest in the present interest in the present interest in the present interimple the present interest in the present interest in the presen

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          엄
The present invention describes a polypeptide sequence comprising part or all of the primary structural conformation of one or more thyrotropin (TSH) receptor epitopes with which autoantibodies and/or lymphocytes produced in response to a TSH receptor interact. Also described: (1) one or more receptor TSH epitopes with which the autoantibodies and/or lymphocytes interact. As with the polypeptide sequence described above; (2) a method of screening for autoantibodies or lymphocytes produced in response to a TSH receptor in a sample of body fluid obtained from a subject suspected of suffering from, susceptible to, having or recovering from autoimmune disease associated with an immune reaction to a TSH receptor to stimulate the TSH receptor, where the binding partner does not comprise TSH nor maturally produced antibodies to the TSH receptor; and (4) a combination comprising the binding partner and one or more further agents capable of stimulating thyroid tissue, and/or tissue containing a TSH receptor, for simultaneous, separate or sequential use in stimulating thyroid tissue, and/or tissue containing a TSH receptor. The specific binding partner in very more further agents capable of stimulating thyroid can be used for treating an autoimmune disease associated with an immune reaction to a PSH receptor. The specific binding partner is useful for the manufacture of a medicament for stimulating thyroid cancer. ACC4491 to ACC44905 and ABP96719 to ABP6750 represent TSH receptor antibody WH companies given in ABP96719 to ABP967710 represent TSH receptor antibody which exemplification of the present invention can in ABP96719 to ABP96770 represent TSH receptor antibody when the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Heavy; light; variable; VH; VL; region; antidigitoxin; monoclonal; antibody; MAb; 26-10; Fv; fragment; antigen; binding site; linker; expression-secretion system; T7 promoter; signal peptide; molecule; polymerase chain reaction; PCR; single chain.
autoimmune disease associated with an immune reaction to a TSH
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö

The sequences given in AAR34670-71 represent the heavy and light variable portions (VH and VL) of antidigitoxin monoclonal antibody (MAb) contributed by the sequence of the smallest complete ante-examples of FV fragments. For its presently known. The DNA fragments encoding these FV fragments were used in the construction of an expression-secretion system for the production of biologically active FV fragments. The system also contains a DNA sequence encoding the TY promoter and one or DNA sequences encoding to or more signal peptides (see also AAR38527-28). The secretion-expression vector was produced by polymerase chain reaction. FV fragments may also be produced by polymerase chain reaction. FV fragments may also be produced as single chain FV molecules (see also AAR34672) which contain the VH and VL regions, a signal sequence and a linker between the two variable regions. Fy fragments and single chain molecules may be used to specifically bind one or more of the same antigens as the full length antibody from which it is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Antidigoxin monoclonal antibody 26-10 heavy chain variable region.

Expression-secretion vectors for prodn. of Fv fragments - used for similar applications as whole antibodies and specifically bind digoxin

Claim 13; Fig 1A; 55pp; English.

Antidigoxin monoclonal antibody 26-10 is a high affinity antibody produced against digoxin conjugated to BSA. cDNA clones of the genes encoding the VH and VL portions of the 26-10 antibody were made by PCR amplification of cDNA generated by reverse transcription of mRNA isolated from 2610 hybridoma. The VH and VL clones (encoding ARISBSB6 and ARISBSP7, respectively) were used in the construction of plasmids (Updated on 25-MAR-2003 to correct PN field.)

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 12,

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 4,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 100. Application US/08137117D

Patent No. 5795965

GENERAL INFORMATION:

APPLICANT: SATO, Koh

APPLICANT: SATO, Koh

APPLICANT: SALO, Roh

APPLICANT: SALOANA, Mary

APPLICANT: SALOANA, Mary

APPLICANT: SALOANA, OSC

TITLE OF INVENTION: RESHAPED HUMAN ANTIBODY TO HUMAN

TITLE OF INVENTION: INTERLEUKIN-6 RECEPTOR

NUMBER OF SEQUENCES: 158
Patent No. 5795965

GENERAL INFORMATION:
APPLICANT: TSUCHIYA, Masayuki
APPLICANT: BENDIG, Mary
APPLICANT: JONEG, Steven
APPLICANT: JONEG, Steven
APPLICANT: JONEG, Steven
TITLE OF INVENTION: INTERLEUKIN-6 RECEPTOR
ITLE OF SEQUENCES: 158
CORRESPONDENCES: 158
CORRESPONDENCES: Lardner
ADDRESSEE: FOLEY & Lardner
